

Name(Optional): _____

Position or Role :

- ☐ Field Technician / Helper ☐ Assistant Operations Supervisor
☐ HR Administrator ☐ Management / Company Leadership

Branch Assignment:

- ☐ Main Branch (San Pedro) ☐ Sister Branch

I. Legacy System Inefficiencies

Direction: Please check (✓) the box that corresponds to your assessment of the existing systems using the scale below:

5 – Strongly Agree

4 – Agree

3 – Neutral

2 – Disagree

1 – Strongly Disagree

	5	4	3	2	1
Using manual notebooks or separate timing devices causes mistakes, missing records, and double entries.					
Gathering and checking paper records by hand leads to errors and makes it take longer to release salaries.					
It is hard to see exactly when and where technicians are working across different branches and project sites.					
Because there is no automatic check, it is easy for people to cheat on their time records or sign in for others.					
Using informal chats or calls for service requests makes it very hard to keep track of where technicians are sent.					
Counting stocks by hand leads to wrong numbers, lost papers, and delays in buying new materials.					

II. Feature and Functionality Requirement Validation

Direction: Please rate the importance of the following functionalities developed in the TechnoSys HRIS/IMS application.

5 – Strongly Agree

4 – Agree

3 – Neutral

2 – Disagree

1 – Strongly Disagree

Checking the real identity of an employee by scanning their fingerprint.					
Allowing employees to clock in only when they are physically inside their assigned work area or project site.					
Making the system accessible on office computers for admins and via a mobile app for field technicians.					
Automatically counting hours worked, creating payslips, and computing government deductions (like Tax, SSS, PhilHealth, Pag-IBIG).					
Saving employee records (201 files) digitally, updating if they are active or on leave, and tracking their work certificates.					
A central screen to list repair requests, assign workers, track jobs, and see which tasks are finished.					
Sending automatic alerts when stocks are low, counting parts in real-time, and requesting new orders digitally.					

III. Post-Implementation Evaluation of TechnoSys

Direction: Please check (✓) the box that best describes your agreement regarding your experience with the TechnoSys platform.

5 – Strongly Agree

4 – Agree

3 – Neutral

2 – Disagree

1 – Strongly Disagree

	5	4	3	2	1
The system records exact work hours, and no one can manually change or tamper with the records.					
Using both fingerprints and location tracking stops employees from cheating or logging attendance incorrectly					
Managers can quickly see exactly who is working on-site and where they are sent in real time.					
Having all data in one system saves a lot of time when gathering records and computing salaries.					
The system is easy to use whether you are in the office using a computer or out in the field using a phone.					
Sending job requests digitally stops tickets from getting stuck and helps technicians finish repairs much faster.					
Real-time tracking prevents running out of parts unexpectedly and makes it easy to match materials with new repair jobs.					

IV. ISO/IEC 25010 Software Quality Assessment & User Satisfaction

Direction: Please check (✓) the box that best describes your agreement regarding your experience with the TechnoSys platform.

5 – Strongly Agree

4 – Agree

3 – Neutral

2 – Disagree

1 – Strongly Disagree

	5	4	3	2	1
The system has all the tools needed to handle HR, technician dispatching, and inventory all at the same time.					
The system works smoothly, updates data correctly across all branches, and does not crash or break down.					
The screens, alerts, and buttons are simple and easy to use without needing a lot of training.					
The system restricts access based on your job role, keeping confidential branch data safe from unauthorized people.					

I am very happy with TechnoSys and find it much better than the old way of doing things by hand.

V. Feedback for Future System Enhancements

This section fulfills your requirement to gather qualitative recommendations for future enhancements.

1. What system problems, glitches, or delays did you experience while using TechnoSys? (Examples: wrong phone location/GPS, slow fingerprint scanning, or slow loading screens)

2. What other features, button layouts, or new changes would you suggest adding to TechnoSys to make it even better for Technocycle Corporation?

Thank you very much for your time and contribution to the development of TechnoSys!
